## Setting up a “Selective Sync” for Folders with Cloud Sync

1. Log into the Synology NAS
2. Open the Cloud Sync application (install it from the Package Center if it is not installed)
3. Setup your Cloud Sync task completely.

Unfortunately, you cannot setup the “selective sync” until the task is setup completely.

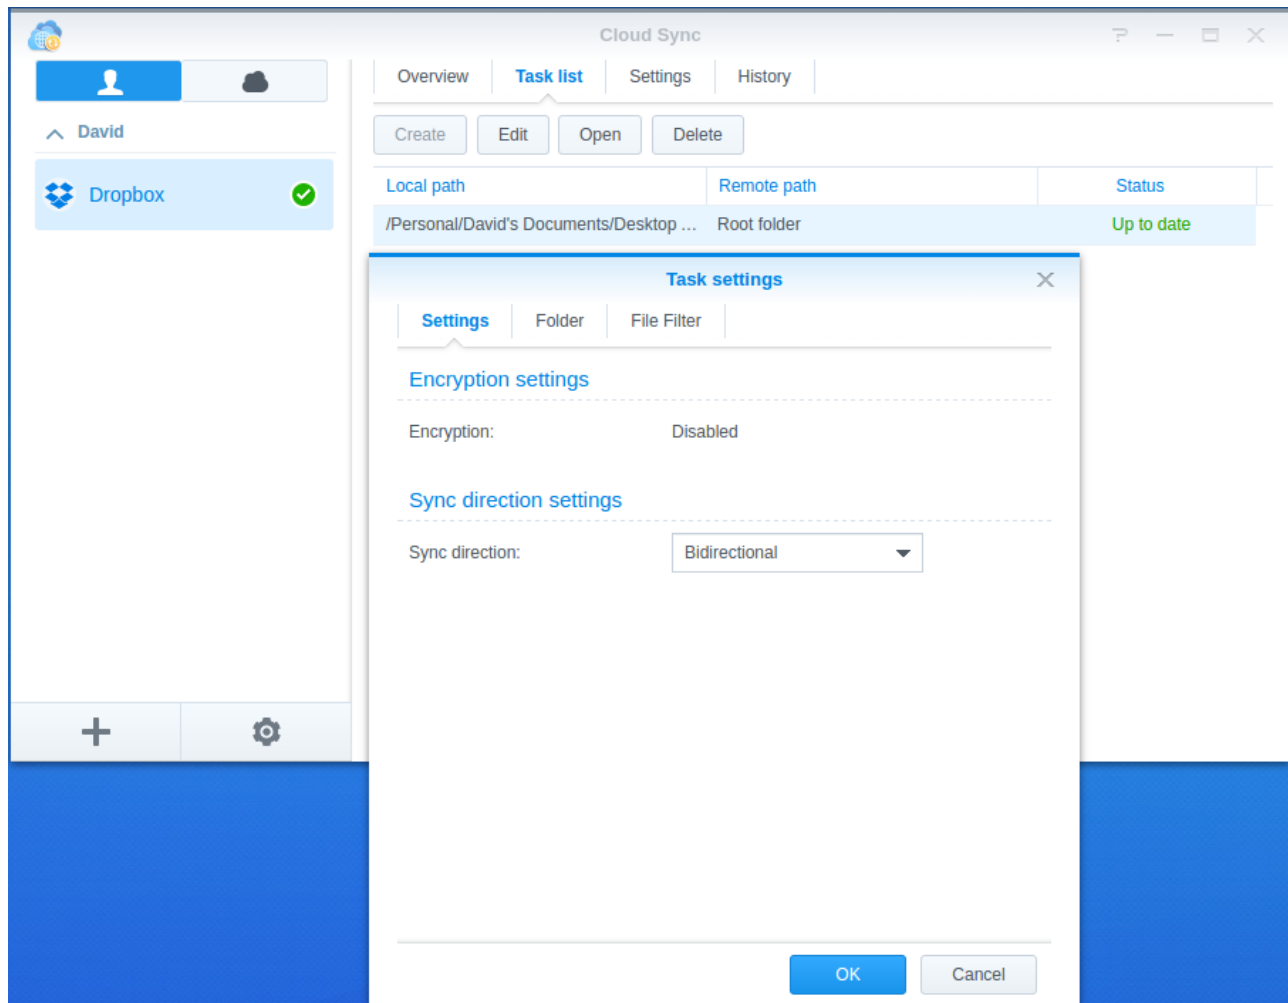

4. Click Manage → “Pause Syncing” to Pause the sync

Synology NAS Instructions

Prepared by: Develop CENTS, LLC (<https://developcents.com>)

5. Click “Task list” at the top of the window, click the task (underneath “Local path”), then click the Edit button.

6. Click on the “Folder” tab, and uncheck the folders that you do not want to sync.
